Filter Configurations 1

Introduction 1.1

- The following chapter helps to select the necessary filter type dependent on the preamplifier and the probe.
- System orders with multiple probes require only the combined minimum set of filters.
- Only standard operation is guaranteed with the recommended filter configuration. Non-standard operation (observe on outer coil and decoupling on inner coil) may also be possible with the recommended filter configuration.
- With individual probe orders the current configuration at the customer‘s labs should be obtained to avoid ordering filters which are already at the site.
- If your probe is not included in this list, please fill in the filter requirements questionnaire at the end of this chapter (***page 26***) and send it to Spectrospin AG, Production Department.
- The exact order number for the corresponding magnet frequency can be taken from the „Available Filters“ list (***page 27***).
- No filters are necessary in the lock channel.
