**CAUTION:** according to the [GIMPshop entry](#) at the [Wikipedia](#),

GIMPshop for Windows is still under development. The only change to the normal GIMP, other than the menu layout and Photoshop naming conventions, is that it adds a background window to the user interface. This background window causes significant bugs in the Windows version, however, often causing windows to gray out or become unresponsive. It also uses an older version of GIMP, 2.2.11, instead of the current 2.4.1. </note>

The design goal behind Stickies is that the program is small and simple. Stickies will not mess with your system files, or write to the registry. Stickies stores information in a single text-based ini file. In order to use Stickies in another language, download one of the Language Library files. Each zip file contains a single file called `language60.dll`.
