

Reserves automàtiques per l'estona de Manteniment

Després de veure que les [reserves automàtiques per la cua de rutina](#) funcionaven correctament, amb la finalitat d'assolir una millor gestió del temps disponible als espectròmetres, m'he decidit a canviar també la forma en què es reserven les estones de manteniment al programa de reserves:

- fins ara les estones de manteniment estaven programades als horaris dels espectròmetres i eren fixes;
- a partir d'aquest canvi les reserves passen a ser dinàmiques com qualsevol altre reserva.

És a dir, si cal, es podran modificar les reserves de les estones de manteniment. Per exemple:

- si es canvia el dia de manteniment, sigui perquè el dimecres es festa o per qualsevol altre motiu, es pot editar la reserva i canviar-la de data, i deixar lliure el dimecres al matí;
- si la recàrrega de nitrogen líquid finalitza força abans que l'estona reservada, es pot editar la reserva i alliberar l'excés de temps reservat;
- si algú vol reservar un espectròmetre el dia de manteniment i l'estona reservada s'ha de facturar, es pot modificar la reserva per manteniment i afegir una reserva a nom del projecte on es carregarà la reserva.

IMPORTANT: Les reserves per les estones de manteniment es crearan automàticament amb vuit setmanes d'antel·lació, per tal que, si s'escau, hi hagi prou temps per modificar-les.

`maintenance_bookings.sh`

Aquest es el programet que crea les reserves per l'estona de manteniment. S'executa tots els diumenges a les 3 de la matinada, i crea les reserves amb dues setmanes d'antel·lació per tal que es puguin modificar si s'escau. El programet també envia un correu electrònic indicant si ha pogut fer les reserves.

[maintenance_bookings.sh](#)

```
#!/bin/bash
#
# maintenance_bookings.sh
#
# (c) 2013, Miquel Cabanas, SeRMN, UAB
#
# Started writing: 2013/10/28
# Last updated: 2013/10/28
#
# This script runs the MySQL commands needed to automatically create
the
# bookings for the spectrometers maintenance tasks, mainly liquid
nitrogen
# refills.
```

```
#
# To run this script every Sunday 2am append an entry like,
#
# FIXME 0 3 * * 1 /opt/bmbee-114-1/bin/maintenance_nmr_bookings.sh
#
# to crontab. This entry means, at minute 0, hour 2, on every (*) day
of
# the month and on every (*) month of the year, if that day happens to
be
# a Sunday (day 0), execute the commands in the script file
# 'maintenance_nmr_bookings.sh' (this file).

Entrada al registre crontab

Aquesta és l'entrada creada al programa crontab per executar automàticament el programet que crear les reserves (crontab -u root -l):

```
# Bumblebee 1.1.4 - Automated bookings for weekly maintenance tasks. It runs
# on Sunday at 03:00.
#
0 3 * * 0 /opt/bmbee-114-1/bin/maintenance_bookings.sh
```

Seguretat

Per motius de seguretat (el programet conté el nom d'usuari i clau de pas de la base de dades de reserves) la carpeta `/opt/bmbee-114-1/bin/` està protegida i té l'accés restringit,

- permisos carpeta bin: 700
- permisos fitxer maintenance_bookings.sh: 700
- propietari (user:group): root:root

A més, per impedir el seu accés a través del servidor web, la carpeta bin conté un fitxer `.htaccess` amb el següent contingut:

```
order deny,allow
deny from all
```

Recreació de les eserves antigues

Aquest canvi a l'horari comporta que tots els matins dels dimecres de les setmanes anteriors apareixen ara sense reservar. Com que això podria distorsionar les dades d'ocupació, creo unes reserves automàtiques per substituir els blocs de temps assignats a les tasques de manteniment
